EDUCATION

New York University - New York, USA Aug 2026 - May 2028
Master of Science in Computer Science
Relevant Coursework: Efficient AI Computing: Algorithm and Implementation, Operating Systems

Indian Institute of Technology (BHU) - Varanasi, India Aug 2019 - June 2023
Bachelor of Technology in Metallurgical Engineering | GPA: 8.98/10
Relevant Coursework: Ubiquitous Computing, Data & Digital Economy, Philosophy, Topics in Cognitive Science

EXPERIENCE

Myntra - Bangalore, India (A Walmart subsidiary and India's largest fashion app with 70M MAU)

Senior Software Engineer Jan 2026 - July 2026

- Identified a **2-day manual workflow** performed by on-call engineers and built an **AI-agent pipeline** end-to-end to fetch App Store/Play Store reviews, identify negative technical issues, map them to owning teams, and automatically generate the weekly engineering report.
- Integrated **Datadog Mobile SDK** across iOS and Android to establish production observability across crashes, RUM, network requests, and application performance; partnered directly with Datadog engineers to diagnose integration issues and tailor instrumentation to Myntra's mobile architecture.
- Identified gaps in mobile performance visibility and architected **Armitage**, a cross-platform observability system using **KMP** and **React Native JSI**, giving engineering teams real-time FPS, CPU, memory, and launch telemetry across iOS/Android with **<2% CPU overhead**.

Software Engineer Sept 2024 - Dec 2025

- Re-engineered Product Listing Page onto an internal Layout Engine framework with half-card and M-Now quick-commerce integrations, **cutting page latency by 30%** and **lifting RPU/conversion by 3%**.
- Integrated **Android Patch Bundle Rollouts** for React Native diff updates, **reducing JS bundle update payload size from ~14MB to <1MB** and improving rollout reliability while lowering user data consumption.
- Designed and deployed a remotely configurable system for dynamically customizing app icons and splash screens during major sale events, eliminating release dependencies and contributing to a **5–8% increase in organic traffic share**.
- Designed a Layout Engine-driven **modal presentation system that dynamically triggers contextual half-cards** based on user interactions (scroll, load) while managing display logic via frequency capping, interval schedules, and A/B testing.
- Drove adoption of a **new iOS Liquid Glass navigation** experience for a large-scale UI overhaul, aligning UX, Product and engineering leadership despite conversion-risk concerns and delivered the implementation within **4 days** and validated a **2% metric uplift** through A/B testing.

FlyFin AI - Bangalore, India (AI tax tools for US consumers)

Software Engineer July 2023 - Sept 2024

- Partnered with CPAs and product/operations teams to translate manual tax workflows into **0→1 product features** across the customer application and internal CPA platform, owning requirements, frontend implementation, backend design and production rollout.
- Architected an automated OCR document upload pipeline integrating **AWS Textract** to extract data from tax documents, streamlining the user experience and driving a **4x increase in successful tax filing completions**.
- Refactored the expense classification engine into a **Celery** and **RabbitMQ** distributed system for horizontal scaling, cutting processing time for 1K expenses by 87% (12 mins to 1.5 mins).
- Developed client-side PDF verification tools (showing bounding boxes, autoscrolling to tax field) using **Canvas API** and **Web Workers** to offload heavy processing from main UI threads, accelerating ops document verification throughput by 40%.

Udaan - Bangalore, India (India's largest eB2B platform with 20M orders per year)

Software Engineering Intern May 2022 - July 2022

- Optimized **Apache Solr** indexing by restructuring schema fields, reducing search latency for high-volume catalog queries.
- Enhanced the **CQRS (Command Query Responsibility Segregation)** synchronization pipeline by implementing automated cleanup cron jobs, maintaining 99.9% data consistency between primary write databases and read stores.

TECHNICAL SKILLS

Languages: Python, Java, TypeScript/JavaScript, Kotlin, SQL, Swift

Frameworks: Django, Node.js, React, React Native, Android, iOS

AI, Infrastructure & Data: AI Agents, LLM APIs, RAG, PyTorch, AWS, Datadog, PostgreSQL, MongoDB, Vector Databases

VOLUNTEERING

- Held the position of **Head at Cisco thingQbator IIT BHU (startup incubator)**, defining vision and devising action plans. Organized and executed four events collaboratively with the team. Coordinated ongoing cohort activities, ensuring smooth completion without interruptions.
