PROFESSIONAL SUMMARY

Full-Stack and Mobile Systems Engineer with 3+ years of experience architecting high-scale iOS, Android, and React Native platforms serving over 70 million monthly active users. Specialized in low-latency mobile runtimes, automated data processing pipelines, and performance optimization. Master of Science candidate at NYU Courant actively researching AI Systems Architecture, ML Infrastructure, and Edge Computing.

EDUCATION

New York University - New York, USA Aug 2026 - May 2028
Master of Science in Computer Science

Indian Institute of Technology (BHU) - Varanasi, India Aug 2019 - June 2023
Bachelor of Technology in Metallurgical Engineering | GPA: 8.98/10

EXPERIENCE

Myntra - Bangalore, India (A Walmart subsidiary and India's largest fashion app with 70M MAU)

Senior Software Engineer Jan 2026 - July 2026

- Architected Armitage, a cross-platform **mobile performance monitoring system** using **Kotlin Multiplatform (KMP)** and **React Native JSI** to track real-time UI/JS FPS, CPU, memory, and launch vitals across iOS and Android with under 2% CPU overhead.
- Modernized core mobile platform infrastructure by **migrating Android to API 35 (Edge-to-Edge and 16KB page-size support)** and **upgrading React Native to 0.78.3 with React 19**, accelerating overall application runtime.
- Spearheaded the Layout Engine-driven **Category Browsing page revamp**, improving responsiveness, enabling scalable experimentation and reducing user steps to PDP across high-traffic shopping journeys.

Software Engineer Sept 2024 - Dec 2025

- Re-engineered Product Listing Page onto an internal Layout Engine framework with half-card and M-Now quick-commerce integrations, **cutting page latency by 30%** and **lifting RPU/conversion by 3%**.
- Integrated **Android Patch Bundle Rollouts** for React Native diff updates, **reducing JS bundle update payload size from ~14MB to <1MB** and improving rollout reliability while lowering user data consumption.
- Engineered a remote configurable system for changing app icons and splash screens during major sale events, driving a **5-8% increase in organic traffic share** by ensuring cohesive visual identity of the app.
- Designed a Layout Engine-driven **modal presentation system that dynamically triggers contextual half-cards** based on user interactions (scroll, load) while managing display logic via frequency capping, interval schedules, and A/B testing.
- Built environment-agnostic staging support and implemented cold launch and page load tracing using **Firebase Performance Monitoring**; proactively resolved **30+ crashes, ANRs and runtime issues** across Android and iOS using **Crashlytics** and **Bugsnag**.
- Built end-to-end **attribution flows** to classify user journeys into Search, Merchandising, Monetisation, Recommendation and Organic buckets by implementing scalable attribution context propagation across navigations, deeplinks and push notifications.

FlyFin AI - Bangalore, India (AI tax tools for US consumers)

Software Engineer July 2023 - Sept 2024

- Delivered multiple 0-to-1 tax features across the consumer app and internal CPA dashboard, **owning frontend UI** and **backend low-level design** with an extensible architecture for future product changes.
- Architected an automated OCR document upload pipeline integrating **AWS Textract** to extract data from tax documents, streamlining the user experience and driving a **4x increase in successful tax filing completions**.
- Refactored the expense classification engine into a **Celery** and **RabbitMQ** distributed system for horizontal scaling, cutting processing time for 1K expenses by 87% (12 mins to 1.5 mins).
- Developed client-side PDF verification tools (showing bounding boxes, autoscrolling to tax field) using **Canvas API** and **Web Workers** to offload heavy processing from main UI threads, accelerating ops document verification throughput by 40%.

Udaan - Bangalore, India (India's largest eB2B platform with 20M orders per year)

Software Engineering Intern May 2022 - July 2022

- Optimized **Apache Solr** indexing by restructuring schema fields, reducing search latency for high-volume catalog queries.
- Enhanced the **CQRS** synchronization pipeline by implementing automated cleanup cron jobs, maintaining 99.9% data consistency between primary write databases and read stores.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, Kotlin, Objective-C, Swift, SQL

Frameworks: React.js, Django, Node.js, React Native

Databases: PostgreSQL, MongoDB, Apache Solr

Tools: Git, AWS (Textract), Celery, RabbitMQ, Android Studio, Xcode
